

Technical Specifications – ToDo-App

The following are technical specifications for a secret agent themed todo/task manager -app.

This ToDo-app should include:

1. A flimsy password protection
 - The password should be Tom Cruise
2. A form where you can add/remove todos
 - completed todos should be strikethrough
3. Date and time
 - changing depending on the user's timezone
 - location should be somewhere less eye-catching
4. Alerts to guide the user
5. Background music
 - Mission: Impossible theme song
 - A moderate volume

The fonts and display should be pleasing to the eye, readable and suit the theme of the task manager. The following fonts are acceptable: Saira Condensed, Tomorrow and Antic (from fonts.googleapis.com) Instead of an "add task" button, there should be a small icon fitting the theme. When the user presses the icon an audio player appears and starts playing the background music. If an empty form is submitted an alert box should appear as well.

This app is not designed to fulfill any of the following requests:

- alerts for tasks
- autoplay audio immediately
- show any weather information

All in all, this simple task manager app should be a non-stressful way for users to keep track of their todos first and foremost. Any additional components may lower the productivity of the users.
